Summary

Aspiring UI/UX Designer and Electronics & Communication Engineering (ECE) student with hands-on experience in user research, wireframing, high-fidelity UI design, and interactive prototyping using Figma and Photoshop. Skilled at analyzing existing products, identifying friction points, and applying user-centered design principles to propose practical, well-reasoned improvements. Strong practice of documenting design rationale through case studies and public UX write-ups.

Education

Rajiv Gandhi University of Knowledge Technologies (RGUKT) Srikakulam, Andhra Pradesh, India

Bachelor of Technology, Electronics and Communication Engineering (ECE)

Experience

UI/UX Design Intern Decode Labs

End-to-end UI/UX design internship

- Completed a hands-on internship covering the end-to-end UI/UX design process, including user research, wireframing, high-fidelity interface design, and interactive prototyping.
- Applied user-centered design thinking to each design assignment, focusing on creating simple, intuitive, and meaningful digital experiences.
- Strengthened practical skills in translating user needs into functional, visually consistent design solutions.

Projects

UX Case Study – POP UPI: "Pay Friends" to "Pay Anyone" Personal Project

Micro-interaction / labeling UX critique

- Identified a labeling ambiguity in the POP UPI app where the "Pay Friends" option was unclear for paying non-contacts.
- Proposed a renaming refinement ("Pay Anyone") to better communicate existing functionality without adding new features or layout changes.
- Documented the UX reasoning behind the recommendation and presented it as a case study carousel for peer feedback.

UX Case Study – District App Navigation Redesign Personal Project

Information architecture / bottom navigation redesign

- Analyzed navigation, information hierarchy, and interaction patterns of the District app after a real-world usability friction point.
- Redesigned the home screen with a four-tab bottom navigation (Home, Experiences, Wishlist, Profile) to surface bookings more quickly.

- Proposed replacing a header shortcut with a Notifications entry point to support time-sensitive updates such as show reminders and refund status.
- Built the complete high-fidelity screen in Figma, strengthening skills in spacing, auto layout, and visual hierarchy.

Organic Vegetables Delivery App – UI/UX Design

Personal Project

End-to-end mobile app design

- Designed a complete app interface for an organic vegetables delivery service, covering user needs analysis, visual direction, and high-fidelity screens.
- Built an interactive prototype in Figma to demonstrate the full user flow.

Product Design Analysis – Blinkit & Spotify

Personal Project

UX research / heuristic analysis

- Conducted in-depth "why" based design analysis of Blinkit and Spotify, examining decisions around information hierarchy, visual contrast, and navigation priority.
- Recreated the Blinkit home screen in Figma to practice spacing, layout consistency, and component structure.
- Documented findings in structured UX write-ups to build a habit of evidence-based design reasoning.

Login Screen – Dark Mode UI Design

Personal Project

Visual design / Figma variables

- Designed a minimal, dark-themed login screen using Figma variables to support light/dark mode theming.
- Focused on spacing, typography, and hierarchy to create a calm, distraction-free login flow.

Skills

Design Tools: Figma, Photoshop

Design Skills: User-Centered Design, UI Design, UX Research, Wireframing, High-Fidelity Prototyping, Interaction Design, Information Architecture, Design Systems, Auto Layout, Design Variables

Other: Design Case Study Writing, Heuristic Analysis, Design Thinking

Additional Information

- Actively shares UX case studies and design breakdowns on LinkedIn, analyzing products such as POP, District, Blinkit, and Spotify.
- Continuously practicing UI fundamentals through screen recreations and design critique exercises.
